Ask about our professional services - Cinematography, Script Research and Writing, Web Design, DVD Authoring and Media Duplication

We don't use "set top" boxes and consumer grade equipment. Our film transfers are preformed on Elmo projectors specially modified with camera chips right in the projector, along with a special, 5 bladed shutter to eliminate the flicker normally seen in film transfers. Each film transfer is continually monitored by a professional technician. Our DVD/MPEG2 encoding stations use high end Canopus encoding cards, and specialized computer software and hardware for the best quality. Film is cleaned and lubricated before it is run, and broken video tapes are carefully repaired.
